LISAP FASHION

Thanks to the LSC (lipoamino silicon complex) complex based on the mix between lipoaminoacidi and water-soluble silicone and SILK-AS, derived from silk fibre, products LISAP FASHION perform two important functions: the lipoaminoacidi repairs hair damage, while the silicone part protects the structure. LSC preserves the integrity of the capillary keratin in hot styling (brush/hair dryer) and SILK-AS, due to the high amount of constituent amino acids, creates an invisible protective film that makes hair soft and fluffy, repair, from within. LISAP FASHION: fixes, protects and models with a single gesture.
