HG LASER FOR KERATIN HG LASER FOR KERATIN

A revolutionary device in the world of cosmetic hair. hg Laser produces a LED light, which intensifies the action of the keratin treatments and by reducing the time of reconstruction work.

Its light beam in contact with the hair is transformed into heat inside (not perceptible) creating a hardening of the active ingredients around the hair keratin, intensifying the action of the polymers.

The hg laser acts in the presence of protein, melanin and water, undo all the mechanical action and strengthens the intensity of the treatments.
